Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant submitted proposed amendment and pointed out the differences between the cited prior art and the claimed invention. Applicant argued that Makinouchi '754, Ozawa'535 fail to teach claimed adjusting unit in the manner of claims 1 and 30. With respect to prior art of Schultz'122, applicant argued that element (600) of Schultz et al does not perform "improve an optical characteristic in an overlapping exposure area formed on the photosensitive substrate" as recited in amended claims 1 and 30. The Examiner understands and appreciates these distinctions and will give them full consideration in the next office action..
